

Year 1 Friday Maths

Correct Answers

The answers to Friday's Math are from a different planet. There are a couple of mistakes on the sheet (which I wrongly assumed would be correct since I got it from a site I pay for!)

Sheet 1 (Easier)

1: A and C match so B is the odd one out.

2: B goes with $12+6$. This is the only one that matches up.

3: Emma is not right. You can make 4 by the following ways:
 $0+4$, $1+3$, $2+2$, $3+1$, $4+0$.

Sheet 2 (Expected)

4: A and B match so C is the odd one out.

5: NONE MATCH HERE

6: Jack is wrong because you can make 15 in 16 different ways:
 $0+15$, $1+14$, $2+13$, $3+12$, $4+11$, $5+10$, $6+9$, $7+8$, $8+7$, $9+6$, $10+5$,
 $11+4$, $12+3$, $13+2$, $14+1$, $15+0$

Sheet 3 (Greater Depth)

7: A and C match so B is the odd one out.

8: A matches with $3+six$, B matches with $ten+10$, C matches with $17+2$.

9: Olivia is wrong. There are 20 ways to make 19.

$0+19$ $6+13$ $12+7$ $18+1$

$1+18$ $7+12$ $13+6$ $19+0$

$2+17$ $8+11$ $14+5$

$3+16$ $9+10$ $15+4$

$4+15$ $10+9$ $16+3$

$5+14$ $11+8$ $17+2$
