

## Computing

WALT investigate how to give basic code instructions and debug my mistakes.

In this Computing lesson, the children will use a computer programme called 'Kodable'. They will have a go at following the instructions to programme. When they have made a mistake, the children will be able to go back and correct it. This is called debugging. Follow the instructions for how to get started (on the next pages). As soon as you have logged in to the programme, it tells the children clearly what to do and how to go from one level to another.
